## **Instructions for PVA Sponge Products**

### **Before Initial Use**

- L Wash or rinse out thoroughly in warm water. The product is packed with an anti-mildew and anti-mold solution that should be rinsed out.
- L If dry or stuck together, do not peel apart! Soak for about 10-60 minutes in warm water (longer if in cold water). If possible, wash with normal laundry - products will come out perfectly hydrated!
- L Store the clean, wet PVA sponge in its plastic container or a zip lock bag. PVA sponges become hard when dry. Simply re-wet and it comes back to life!
- L For extended periods of time, store in the dry form, or leave the cap off the container

### **Proper care of product**

- L Machine wash (washing machine or dishwasher) with liquid detergent and/or ammonia - avoid powder or bleach.
- L Do not dry in the dryer! (The product is used wet - drying doesn't hurt, but is meaningless).
- L PVA sponge is not affected by mold, mildew, or odor. If PVA sponge or PVA towel has mold or mildew (brown, black, or green spots), wash in liquid detergent and ammonia. If mold or mildew is still evident, soak in a 5:1 solution (5 parts water for 1 part liquid bleach) for about 5 minutes. NOTE: Color of product may fade due to bleach. Test for fastness!
- L PVA products work even better after washing several times.
